

LG'S MULTI M – YET ANOTHER MULTI-SPLIT A/C WINNER

Now available from LG is the Multi M – a multi split system, which offers an ideal comfort cooling-only, or heat and cooling option with stylish Art Cool or wall mounted indoor units. This energy efficient system is suited to prestigious houses, apartments, restaurants, executive office suites and retail sites requiring aesthetically pleasing units.

The outdoor units use MPS variable control – this uses single phase electricity with two compressors operating at 40 and 60% - rather than conventional ones working at 100%. This allows for energy savings of up to 35%. The load conditions for one or both of the compressors achieve the desired temperature setting so that it changes to suit demand. Only one is needed for low demand and both for high.

Outdoors units are cooling-only and cooling/heating mode with capacities ranging from 4.2-8.7 for cooling and 4.2-9.6 for cooling/heating. All outdoor units feature a Gold Fin surface on the heat exchanger, which prolongs a durable and robust working life of the product.

A maximum of four indoor units can be run off one outdoor unit –these can be any combination of wall mounted or Art Cool Mirror or standard.

Both types of indoor units are stacked and packed with user features and benefits – the Jet Cool which quickly and efficiently cools; the 'Chaos' swing which gives more even cooling than conventional vane cycle types; Nano Plasma Air Purifying; Nano Cannon Ball for effective air deodorising; Auto clean mode on Art Cool – this 30minute cycle removes residual moisture and mould contaminants; self-diagnostic programme – gives clear indication of any problem.

All LG's Multi M indoor units have a handheld infrared remote controller for temperature settings, mode selection, air circulation and fan operation.

There is also a set of control options available. The simple central controller, for example, is hard wired and can control all of the indoor units.

LG's Multi M is fully supported by the company's technical after-sales service.
